## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record, especially Barthomeuf '136, teaches a damped hammer drill, which comprises in combination a shank, a reciprocating percussion piston with a damping sleeve coaxially surrounding the shank for absorbing the impact force generated by the percussion piston. The sleeve-like pulling element of the claimed invention differs from the prior art in that, it is not only designed to absorb the impact force generated by the percussion piston, it least further generates push force on the pulling element for moving the pulling element away from the percussion piston, the push force is made stronger than the first force moving the pulling element toward the percussion piston during rock drilling.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yantsen et al, Lee, Barthomeuf, Hedlund et al, Patterson, Javins and Beccu all teaches percussion drills and control devices.
